Pessimism over farmland market and rural economy remains
Farmland values in Midwest and Plains States under pressure

Cropland values and cash rents move together but rents slower to adjust
Returns to cropland and 10 yr Treasury rate on downward trend since mid-80s
10 year Treasury rate down 43 basis points since Dec 16 Fed rate hike
Capitalized values indicate cropland values are not overpriced – yet!

10 Yr. Treasury increase to 2.5%, 10% cut in cash rent: Capitalized value drops 23% and reduces premium over cropland value from 39% to 7.3%.

Source: FCA-ORP from USDA-NASS and ERS data.
A big interest rate hike could lead to a significant correction in cropland values.

10 Yr. Treasury increase to 3.5%, 10% cut in cash rent: Capitalized value drops 45% and reduces premium over cropland value from 39% to a 23% discount.
Forces behind weakening cropland values

- Third consecutive year of declining crop prices and second year of declining livestock prices
- Producer profit margins being squeezed
- Farm income projected to drop again in 2016
- Export earnings constrained by strong dollar, trade disputes and sluggish economic growth
- Anticipation of interest rate rise by the Fed
USDA projects another year of lower crop and livestock prices

* 2016 for livestock prices and 2015/2016 for crop prices. Crops and milk are based on average price received by farmers. Animal prices are based on wholesale prices.
Recent rally in futures prices reflect crop problems in South America
Farm sector profitability forecast to decline for 3rd year in a row

Take aways

- Global forces will continue to pressure commodity prices and farm income in 2016
- Cropland values in nation’s midsection declining and expect further drop as long as farm profitability down
- Interest rates remain low, but an increase later in the year and beyond could put further downward pressure on farmland values

California Almond Crop Prospective Forecasts

Source: Bill Morecraft, Blue Diamond Almonds, presentation at USDA's Agricultural Outlook Forum, February 1, 2015.
Larger crops ➞ lower prices

**Average grower prices (USDA)**
- 2004 – 2010 crops = $1.96 per lb.
- 2011 – 2014 crops = $2.74

- Based on recent demand-price relationship, grower prices for next several crop years could decline to $2.00 – $2.50 per lb. in order for the “market to clear”

**Possible alternative price outcomes:**
- **Weaker:** below $2 per lb. with above-average yields or poor demand
- **Stronger:** above $2.50 with additional increases in demand

Factors affecting producers

- Positive
  - Industry marketing and promotions
  - Consumer income gain
- Negative
  - Strong dollar
  - Wholesale and export prices have been typically “sticky” – a faster downward adjustment would help move more product

Breakeven returns to vary

- Almond prices at $2.50 would result in a farm loss or gain, depending on farm yield.
- Prices near or below $2.00 would result in a loss across all yield scenarios.

Note: Latest data available. Walnut cost of production rose 34.5% between 2012 and 2015; implies $4,942 per acre for almonds in 2015.
Water costs and current situation

- Short-term almond supply growth slowed by water issues
- Irrigation costs for walnuts increased from $138 per acre in 2012 to $270 in 2015 (+96%)
- Salt intrusion remains a problem
- Current water situation: improved in winter and spring; cooler spring weather also has been helpful
Modest rise in cropland value

Managing risks in almond farming

- Federal crop insurance for yield loss
  - 83% of almond acreage insured in 2015
  - Catastrophic coverage is essentially free, additional coverage is subsidized
- USDA’s Tree Assistance Program (TAP)
  - Free coverage for losses in excess of 15% to replant trees damaged by natural disasters
- Federal Marketing Order – Almond Board of California
  - Industry-funded market promotion and research
  - Volume regulation in times of low prices (last used in 1994)

Conclusions

• Almond demand has strengthened over time
• Larger supplies ahead, prices to decline
• Potential for margin stress in next few years, particularly if almond grower prices drop to $2 to $2.50 per pound
• Overall exposure for FCS and Farmer Mac is limited via diversification
• No immediate concerns with credit quality
