Topics for Open Session

- Economic Conditions Affecting the Farm Credit System
  - Macro, inputs, and supply chain
  - Commodity margins
  - Farm sector income and real estate values

- Farm Credit System Condition and Performance
  - System growth and loan portfolio
  - Earnings and capital
  - Financial Institution Rating System (FIRS)
Economic Conditions Affecting the Farm Credit System

Dennis A. Shields
Chief Economist
Office of Data Analytics and Economics
U.S. economy powers forward, but inflation could alter trajectory

- U.S. GDP growth slowed in the third quarter, constrained by supply chain issues and labor shortages.
- Employment numbers remain below pre-pandemic levels on falling workforce participation.
- CPI inflation hits a 30-year high, and consumer sentiment falls to 10-year low.
- Fed policy holds rates steady despite growing concerns that inflation is not “transitory.”
- Relatively strong economic growth is expected for major importers of U.S. agricultural products.
More costly inputs and supply chain woes challenge producers and marketers

- Ag producers face major cost increases for energy, transportation, and labor.
- Chemical inputs have soared:
  - Fertilizer prices are up sharply on rising natural gas and transportation costs, plus strong global demand.
  - Generic glyphosate prices have doubled.
- Global farm equipment industry continues to struggle with product and parts delivery.
- Supply chains may not fully recover until 2023.

Source: New York Mercantile Exchange as reported by Trading Economics.
Note: Btu = British thermal unit.
Shipping costs show signs of easing

- Transportation bottlenecks have kept U.S. ports logjammed with ships from Asia.
- Backhaul opportunities to Asia evaporated.
- Shipping rates set records, but have recently declined as shipping demand eases seasonally.
- Situation is expected to improve over winter.

Sources: Bloomberg for container rates and Trading Economics for London-based Baltic Exchange Dry Index.

Notes: Container rate for Shanghai-to-Los Angeles trade route; FEU = 40-foot equivalent unit.
U.S. ag exports to remain strong in 2022

- Value of U.S. agricultural exports projected at record.
- Trade supported by global economic recovery.
- Relatively strong demand for a range of ag commodities.
- China to remain largest market, driven by import needs and policy.

Source: *Outlook for U.S. Agricultural Trade*, USDA.
Notes: October-September fiscal years; F = forecast as of 11/23/21.
Grain farm income to fall in 2022 with higher input costs

- Net income in 2022 for Illinois grain farms are projected lower, approaching 2013-2019 average.
- Higher fertilizer costs are major driver.
- Sharply lower crop prices would trigger negative net incomes and major cost adjustments for these farms.

Notes: Example serves as proxy for Midwest grain farms. Projections for a corn/soybean farm in central IL with 1,400 acres. For 2022, assumes higher fertilizer costs than in 2021 and per-bushel soybean prices of $12 and $10.
Livestock producer margins in 2021 have been favorable, except for dairy

- Cow-calf margins are positive outside of drought areas.
  - Poor pastures and expensive hay stress some producers.
  - Cyclical downturn in cattle inventory means higher calf prices next year.

- Hog margins have been robust despite high feed costs.
  - Reduced slaughter and strong exports supported hog prices in 2021.
  - Record high retail prices will slow purchases in 2022.

- Broiler margins find rare air, remain high through most of 2021.
  - Industry cautiously expanded production in 2021.
  - Chicken wings compete with burgers and pizza – a major structural shift in demand.

- Dairy margins remain well below 5-year average.
  - Milk prices increased only 1% compared with double-digit gains for cattle, hogs, and broilers.
  - Poor margins have not been offset by ad hoc payments and federal purchases (as in 2020).

Farm income to remain above average in 2021

Note: Forecast for 2021 as of December 1.
Midwest farmland markets soar

- Banker surveys report double-digit gains for cropland prices.
- Farm auctions trigger strong farmer and investor interest.
- Sales volume is up across much of Corn Belt this fall.
- Pasture/ranchland prices are also up sharply outside of drought areas.
- Drivers: high profits for crops, low borrowing rates, negative returns on alternative investments, inflation concerns, and demand for rural land.

Farmland markets are stable-to-higher in Pacific Northwest and California

- In the Pacific Northwest, most areas report strong demand for good quality ag land, rural residential properties, and ranches.
- Prices have risen for California farmland with good water rights.
- With water availability a major determinate of land usage, valuations can be half when water rights are less secure.

Patterns in movements of farmland value can have implications for collateral risk

- State farmland values follow a distinct pattern in:
  - OH, IN, IL, IA, NE, MN
  - MO, KS, OK

- A different pattern emerges in:
  - RI, DE, MD, VA
  - FL, GA, NV

- Real estate values might have similar patterns in unexpected places.

Notes: States are arithmetically grouped by similarity of changes in state average farm real estate values (USDA/NASS, 1996-2021). Charts show pattern of change, not specific values.
Concluding comments

▶ Expanding economic activity in the U.S. and abroad supports demand for U.S. farm goods.
▶ Inflation and input costs continue to affect producer returns and consumer demand.
▶ Pandemic-related challenges present risks while driving change in operations for businesses and customers.
▶ Drought and water concerns stress some regions and producers.
▶ Stable-to-strong land market strengthens farm balance sheets.
▶ Farm income to hit multi-year high in 2021, but shrinking government payments make future profits uncertain.
